

(a) Observed land use, period 3

outline: change since period 2
30 × 30 window of the domain

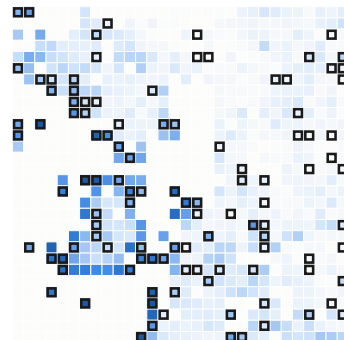

(b) One realisation

random forest, median draw
FoM 0.14 (whole domain)

(c) Change frequency

random forest ensemble
outline: observed change

forest urban
arable lake (fixed)

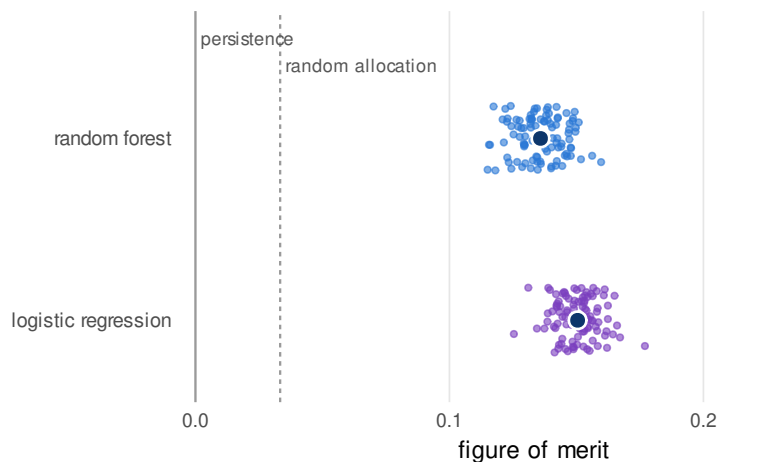

hit false alarm
miss wrong hit

share of realisations

(d) Figure of merit against the held-out observation

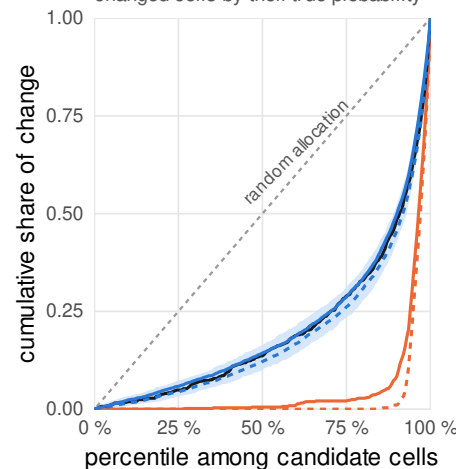

one dot per realisation (n = 100 per learner)

◆ deterministic allocation ● ensemble expectation

(e) Where change is placed

changed cells by their true probability

— observed change
— realisations (median, 5-95 %)
— deterministic allocation
— random forest - - logistic regression
